A J2534 cable that supports the needed channel(s) (ISO9141/CAN/ISO15765/J1850) should work with any J2534-compliant software, OEM or third party. That said, there can be issues with OEM software not behaving in J2534 compliant ways due to bugs or design errors. For this reason, we are maintaining a list here of software which is known to work with our cable. If you find other software which works (or has problems) please let us know at support@tactrix.com. The NASTF also maintains a

Service Information Matrix

which can help you find software for a particular make.

| Company | J2534 Program | Status | Notes |
|---|--|----------------|-------------------|
| Audi | erWin Not Tested | | |
| BMW | Minimal Testing | | |
| Chrysler Ford J1850 support pending | Not Tested http://www.motorcraft | aftservice.com | Not Yet |
